Royal Viking

Royal Viking – 150 years old, and in production again. The 19th century was the century of new styles. Around the middle of the century, neo classicism and romanticism lived side by side and inspired new forms. At the same time, industrialism made its entrance. In the midst of this creative period, when craftsmanship was at its height, the “king among Swedish cast iron stoves” was created.

The impressive ornamented outer jacket in cast iron is completely in harmony with the original design. The inner chamber contains the latest technology. A solid and ingenious

design, which gives the Royal Viking an efficiency of >80% as well as a very large heat output area.

The heat from the flue gases is utilized to the maximum due to a long flue gas outlet. It spreads effectively, partly as radiated heat and partly via the air that can circulate between the stove's walls and flow out. The high heat capacity of the cast iron provides cosy residual heat for long periods.

If you wish for a stove to add to the warmth of your home, you have a warm, reliable and faithful friend in the Royal Viking.

Royal Viking

Article no: 101850002, black
101850004, anthracite grey

The Royal Viking comes with a connector to the flue gas outlet on the rear and it is suitable for today's modern chimneys, which withstand up to 350 degrees. The stove can be placed directly on to wooden floor beams, but don't forget to protect the floor with accessories such as our black enamelled floor plate.
